

Assignment One

Capturing Data & Variables

Due: Week 5 by 11:59pm

Description:

Using what you have learned so far, you will create a one-page form that a user would use to order a pizza. When the user fills out the form the order should then be saved to the database and an order confirmation containing their choices should be displayed to the user.

Instructions:

Please read and follow the instructions found below carefully:

1. Create the HTML form that the user can use to provide the required data, the input types should match the type of data that is expected from the user.
2. Style the page so that the form/page is visually appealing. The CSS should be in a separate CSS file.
3. Use variables to store the data gathered upon the form submission.
4. Insert the data stored in the variables to the database.
5. Display the content stored in the variables.
6. Submit the assignment link to Blackboard along with a link to your GitHub repository.

Submitting your work:

Submit the assignment link to Blackboard along with a link to your GitHub repository.

Evaluation:

Task	0 - 1	2 - 3	4 - 5	Mark
Variables	No variables used.	Variables created but with errors.	Variables created with little to no errors.	/5
Form	No form found.	Form is used but with errors.	Form created with little to no errors.	/5

Comments	No comments found.	Some comments found.	Code is commented well, and comments make sense.	/5
Valid HTML	HTML has more than 5 errors	HTML has less than 5 errors.	HTML is error free.	/5
Create Data	PHP is not functioning.	Functioning but with errors.	Functioning with no errors.	/5
Read Data	PHP is not functioning.	Functioning but with errors.	Functioning with no errors.	/5
CSS	No styling.	Very little styling.	The page is visually appealing.	/5
Total				/35
